The Philippine Data Privacy Act of 2012 is an act that protects personal information processed by both government and private entities in the Philippines, while GDPR is one of the strictest global privacy laws; it applies to any entity handling EU citizens’ data, regardless of location while California Consumer Privacy Act is a Consumer-focused law that grants rights like knowing what data is collected, requesting deletion, and opting out of data sales. In the Philippine Data Privacy Act, cross-border data flow is allowed but only if the recipient country ensures a comparable level of data protection, or if the data subject gives consent. While GDPR doesn't allow Transfers outside the EU unless the third country has an "adequacy decision" (recognized by the EU as secure), or other legal safeguards. The California Consumer er Act has no direct restrictions on international transfers, but businesses must maintain transparency on data usage and sharing, regardless of where the data goes. These restrictions are important because Facebook Cambridge Analytica Scandal (2018), wherein Data from over 87 million Facebook users worldwide was harvested without proper consent and used for political profiling and targeted ads. This showed the Cross-border risks wherein data collected in one jurisdiction (the US) was exploited globally, showing how weak rules in one region can have worldwide effects.
